Unity Developer (C#) | Mobile 3D | Gameplay

Summary

Unity/C# developer (M.Sc. Computer Science) focused on shipping mobile 3D gameplay loops with clean, production-ready iteration. Comfortable implementing mechanics end-to-end (physics, UI, asset integration) and debugging tricky edge-cases on iOS and Android.

- Gameplay and mechanics: colliders, rigidbodies, joints/constraints; collision debugging; tuning friction, restitution, and mass; CCD/solver awareness.
- Mobile production: UI layout (UGUI), integrating animations/models/VFX/audio; Android + iOS build specifics; profiling and optimization with Unity Profiler.

Education

M.Sc. Computer Science and IT - University of Maribor (2020 - 2024)
B.Sc. Computer Science and IT - University of Maribor (2016 - 2020)

Work Experience

High School Professor (Software/IT) — 2021 - 2024

School Center Velenje | Slovenia

- Led rapid prototyping and iterative debugging for student software projects (including Unity 3D demos); mentored teams with clear feedback loops.

Technical Assistant — 2019 - 2020

Ministry of Public Administration | Slovenia

- Built internal cross-platform tools used across multiple IT teams; delivered maintainable features under change control and stakeholder feedback.

Software Developer Intern — 2018 - 2019

Mega M d.o.o. | Slovenia

- Built core architecture and UI for a Xamarin retail app (login, API integration, data presentation); practiced shipping for real users.

Skills and Approach

Unity/C#	Gameplay systems, UI and tools; clean component architecture; ScriptableObjects and data-driven content.
Gameplay	Mechanics implementation with Unity physics; interaction tuning and collision edge-cases; performance-aware iteration with test scenes.
Visual/FX	Asset integration (models, animations, VFX, audio), materials and lighting; Animator; particles; basic URP post-processing.
Workflow	Git (branching/PRs, diff reviews); reproducible bug reports; Windows/Linux; remote collaboration.

Selected Projects

RyftRealm (personal, mobile 3D)

- Mobile-first game prototype: implemented core gameplay systems from scratch with data-driven economy/inventory; optimized for mobile iteration.

ARnet (Unity AR, Google Play)

- Built and published an AR network-simulation learning app (Google Play) with interactive 3D content, guided lessons, and polished UX flow.

VR4LL 2.0 (Unity/XR)

- Lead Developer; shipped VR learning experiences with robust interactions, asset integration, and performance-aware scene setups.

Languages

Slovenian (native), English (fluent)
