

Summary

Full-stack developer (M.Sc. Computer Science) delivering internal tools, workflow automation, and user-facing products in high-accountability environments. Operates effectively as a solo technical owner: discovery, MVP delivery, iteration, and pragmatic hardening with security-aware tradeoffs.

- AI enablement & delivery: Professional AI workshops + applied AI features in EU-funded VR language learning platform.
- Impact: ~20% grading-time reduction (automation), 30–40% faster IT resolution, up to 20% cost savings (procurement).

Education

M.Sc. Computer Science & IT - University of Maribor	2020 - 2024
B.Sc. Computer Science & IT - University of Maribor	2016 - 2020

Work Experience

AI Workshop Instructor & Advisor	AI workshops / Telemach JobLab (Slovenia)	2025
Delivered professional AI workshops; advised schools/companies on use-case discovery and prioritization (value, feasibility, risk). Guided participants from idea to MVP planning; emphasized practical workflows and professional usage patterns.		
High School Professor	School Center Velenje (Slovenia)	2021 - 2024
Taught 200+ students across AI, Web, Multimedia, and Networks (95% pass rate). Supervised projects incl. Python AI grading assistant (~20% time reduction) and shipped prototypes via 5+ game jams.		
Technical Assistant	Ministry of Public Administration Slovenia	2019 - 2020
Modernized IT across 100+ facilities; up to 20% cost savings (centralized procurement) and 30–40% faster resolution via process/tooling improvements. Built internal workflow tooling (Xamarin + MySQL).		
Software Developer Intern	Mega M d.o.o. (Slovenia)	2018 - 2019
Built e-commerce platform and Xamarin mobile app; loyalty + discount notifications increased engagement by ~30%.		
Web Developer Intern (Erasmus)	bits & bytes (Malta)	Spring 2015
Contributed to online retail platform (HTML/CSS/PHP/MySQL).		

Skills & Approach

Engineering	Python, JavaScript, C#, PHP, SQL • Node.js/EJS • REST integrations • MySQL, MongoDB • Git
Prototyping	Unity (C#) • Cinema 4D • Photoshop • Blender (rapid prototyping, visualization, demo readiness)
Delivery	MVP-first iteration • Stakeholder interviews • Documentation & handover • Integration-first, then hardening
Security-aware	Data minimization • access boundaries • auditability for sensitive actions • escalation to specialists when needed

Projects

VR4LL 2.0 (EU-funded VR language learning) - Lead Developer

- Led VR learning environment development (Unity) and contributed to AI-assisted language learning features/integrations.
- Coordinated student contributors when needed; reviewed and integrated work to keep delivery consistent.

ARnet (AR learning app for computer networks)

- Unity AR app for network simulation; reported ~20% improvement in average grades.
- Improved intuitiveness based on user requirements; ARFoundation/ARCore/ARKit.
