Unity Developer (C#) | Gameplay | XR

Summary

Unity/C# developer (M.Sc. Computer Science) focused on gameplay feel and production-ready iteration. Comfortable with scene assembly (asset import, materials, lighting), animation and VFX hookups, and debugging interaction edge-cases on mobile and VR.

- Gameplay and interaction: colliders, rigidbodies, joints/constraints, contact filtering, collision debugging; tuning friction, restitution, and mass; CCD/solver awareness.
- Scene setup: asset import and placement, materials and lighting; Animator integration, tweens, particles and VFX; Git workflow with reproducible test scenes.

Education

M.Sc. Computer Science and IT - University of Maribor (2020 - 2024)

B.Sc. Computer Science and IT - University of Maribor (2016 - 2020)

Work Experience

High School Professor (Software/IT)

2021 - 2024

School Center Velenje | Slovenia

- Led rapid prototyping and iterative debugging for student software projects (including Unity interactive demos) with clear feedback loops.

Technical Assistant

2019 - 2020

Ministry of Public Administration | Slovenia

- Built internal cross-platform tools used across multiple IT teams; delivered maintainable features under change control and stakeholder feedback.

Software Developer Intern

2018 - 2019

Mega M d.o.o. | Slovenia

- Built core architecture and UI for a Xamarin retail app (login, API integration, data presentation); practiced shipping for real users.

Skills and Approach

Unity/C#	Gameplay systems, tools and UI; component architecture; ScriptableObjects and data-driven content.
Gameplay	Interaction tuning and debugging; constraints and collision edge-cases; performance-aware iteration with test scenes.
Visual/FX	Asset import and placement, materials and lighting; Animator integration; tweens; particles and VFX hookups.
Workflow	Git (branching/PRs, diff reviews); reproducible bug reports; Windows/Linux; remote collaboration.

Selected Projects

VR4LL 2.0 (Unity/XR)

- Lead Developer; shipped VR learning experiences with robust interactions and performance-aware scene setups.

ARnet (Unity AR, Google Play)

- Built and published an AR network-simulation learning app with interactive 3D content and guided lessons.

RyftRealm (personal)

- Mobile-first game prototype: data-driven tooling and tight gameplay iteration under mobile performance constraints.

Languages

Slovenian (native), English (fluent)
