

Aleš Spital

Unity/XR Developer • AR/VR, Mobile, AI-Enabled Product Work

Velenje, Slovenia • EU citizen • Open to remote / hybrid / relocation • +386 31 214 316 • ales.spital@gmail.com
linkedin.com/in/ales-spital • alesspital.github.io • github.com/AlesSpital

Unity/XR developer with an M.Sc. in Computer Science, building VR, AR, and mobile products from concept to release-ready builds. Led end-to-end delivery on VR4LL 2.0, an EU-funded Meta Quest project, shipped ARnet on Google Play, and combine strong Unity/C# systems thinking with standalone VR optimization, REST/API integration, and product-minded usability.

EXPERIENCE

Lead Unity/XR Developer

VR4LL 2.0 (EU-funded Erasmus+) • Tehnološki park Ljubljana • 2023–2025

- Led end-to-end Unity delivery across three standalone Meta Quest learning environments, from prototype to release-ready builds.
- Built multiplayer interaction flows, onboarding/UI systems, and performance improvements for standalone VR constraints.
- Translated instructional needs into clearer product experiences, helping technical content become easier to learn and deploy.

Computer Science Teacher / AI Workshop Instructor

School Center Velenje + workshops for schools and companies • 2021–2025

- Designed and delivered software, networking, and AI instruction for 300+ learners, turning complex technical topics into practical, hands-on outcomes.
- Built learning materials, demos, and applied software tools, including the ARnet AR networking simulator used to improve engagement and clarity.
- Delivered AI-focused workshops and advisory sessions, helping non-technical audiences adopt new tools with confidence.

C#/.NET Developer

Mega M d.o.o., Slovenia • 2019–2020

- Built Xamarin.Forms mobile app architecture and core UI screens for login, navigation, and data presentation.
- Integrated REST APIs and processed JSON/XML payloads in Git-based development workflows.

Software Developer Intern

Slovenia • 2018–2019

- Supported software delivery work across implementation, testing, and everyday development tasks in a team setting.

SELECTED PROJECTS

ARnet — Published AR learning app on Google Play that lets users build and explore network simulations with guided lessons in an interactive 3D environment.

RyftRealm — In-development mobile game that turns daily steps into exploration, crafting, and home-building progress, with a strong focus on systems design and usability.

XR / AI product prototypes — Built applied AI workflows, GPT-style features, and simulation concepts where technical capability has to translate into clear user value.

EDUCATION

Master of Computer Science and Information Technologies

University of Maribor • 2020–2024

Bachelor of Computer Science and Information Technologies

University of Maribor • 2016–2020

"I build VR and AR products in Unity that people can actually use."

CORE STRENGTHS

XR & game development

Unity, C#, AR/VR, Meta Quest, mobile game systems, Netcode/multiplayer, interaction design, UI with uGUI / TextMeshPro.

Product & performance

Rapid prototyping, profiling-led optimization, frame-time stability, standalone VR constraints, system architecture, onboarding clarity.

Integrations & tooling

REST APIs, JSON/XML, Git, Android build/release workflows, MySQL basics, Shader Graph familiarity, AI-assisted workflows.

LANGUAGES

Slovenian (native) English (fluent)

FOCUS AREAS

XR learning products, simulation tools, AI-enabled user flows, interaction-heavy apps, educational technology.
